

JOHN DEERE | MAX EMERGE

Kit Components

To assemble the diffuser, you must order the **QDC-DXP® JD** kit.

Please refer to the pictures of the components supplied with the kit and to the tools needed to assemble these components on your seeder.

Assembly

- The seeder with the micro granular insecticide design has a flexible microgranule tube for each seeding unit. They can be purchased as spare parts from your John Deere distributor. Item number A37494 - **Picture 1**
- Install the John Deere holder supplied in the kit - **Pictures 2 & 3**
- Put the John Deere drop tube into the rubber tube and fix it with the clamp - **Picture 4**
- The assembly will be installed in the hole provided for this purpose on the rear part of the of the seeder - **Picture 5** - And then in the holder beforehand installed - **Picture 6**
- Assemble the QDC-DXP®-JD diffuser and secure it to the rubber tube using the clamp - **Picture 7 8 & 9**
- Place and center the QDC-DXP®-JD diffuser vertically and in line with the sowing furrow - **Pictures 9 10 & 11**
- If necessary, the diffuser height can be adjusted by shortening the flexible rubber tube.
- Check the condition of your diffusers, their positioning and fixing after a few hours of operation and more generally throughout your seeding campaign.
